***UltraLoft* Electronic Weight Control System**

Card Clothing & Services, Inc. (CCS) has developed the new ***UltraLoft*** blend line electronic weight control system that can be incorporated on new multiple hopper blend lines or retrofitted to an existing blend line.

The ***UltraLoft*** UL/CE compliant system is designed around off the shelf components manufactured by Siemens, Allen Bradley and others. The ***UltraLoft*** PLC based touch screen control system includes features such as receipt management, equipment auto start/stop, active weight control, alarming, graphs, trending, spreadsheet reporting, help screens, remote online support and multilingual text.

The new ***UltraLoft*** electronic weighing system is able to store hundred of blend receipts in the internal memory and on a typical flash drive. The ***UltraLoft*** system is actively correcting any variance in the fiber weight and/or percentage. The alarming feature will notify an operator if a hopper runs low of fiber. The ***UltraLoft*** system can be seen on the company's web site or demonstrated at your facility upon request.
